

Dear Deepwatch Team,

I am writing to apply for the Full Stack Developer position. I have strong experience with the MERN stack (MongoDB, Express.js, React.js, Node.js) and have built scalable applications with clean UI and robust backend APIs. I'm passionate about cybersecurity and would love to contribute to your detection platform.

At Tejas Networks and Itobuz Technologies, I developed internal tools, REST APIs, and responsive frontends. I'm comfortable with Git, Linux, Docker, and Agile workflows. I also have a good understanding of authentication, ORM, and secure coding practices.

I am excited about the mission at Deepwatch and look forward to the opportunity to grow while helping protect your customers.

Thank you for your time and consideration.

Sincerely,

Alok Ranjan Joshi
